Block-specific PSE and lapse rates with shared slope: pooled and equal-session psychometrics by subject

$P(\text{Long} \mid x, b) = \lambda_b + (1 - \lambda_b - \gamma_b)\,\sigma[\beta(x - \alpha_b)]$; $\alpha_N = \alpha_0,\ \alpha_L = \alpha_0 + \delta_L,\ \alpha_S = \alpha_0 + \delta_S$
