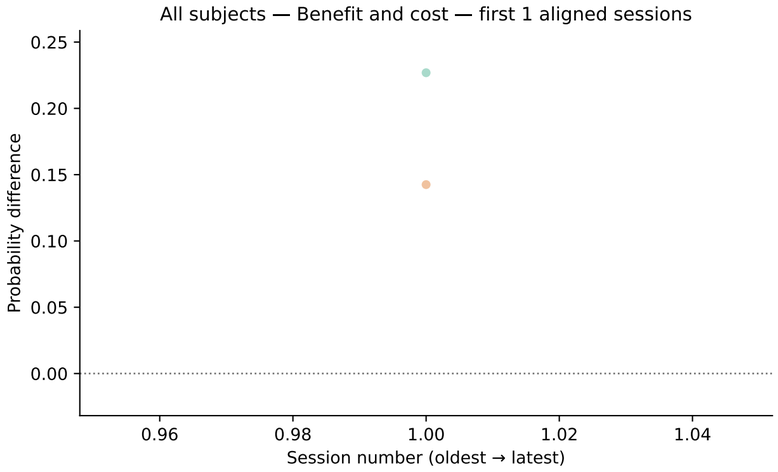
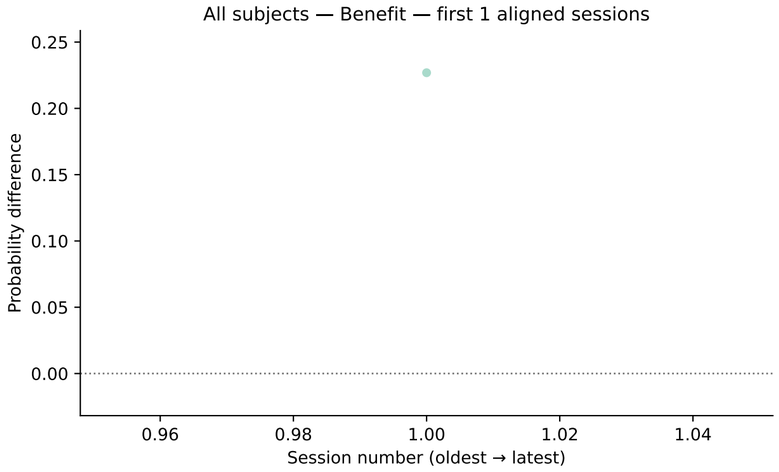
PAGE 1: Meta-learning across sessions — 3-session rolling mean (chronological order)
Benefit = P(correct | common) − P(correct | neutral); Cost = P(correct | rare) − P(correct | neutral)

Benefit: session value
Benefit: 3-session rolling mean
Cost: session value
Cost: 3-session rolling mean

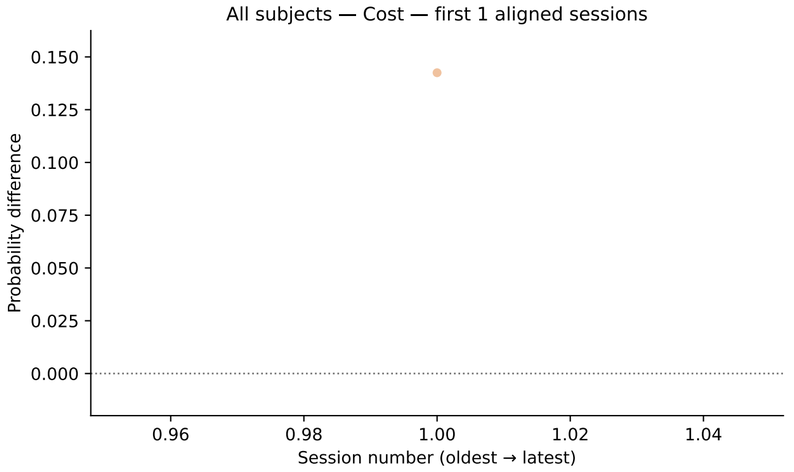
All subjects — Benefit and cost — first 1 aligned sessions



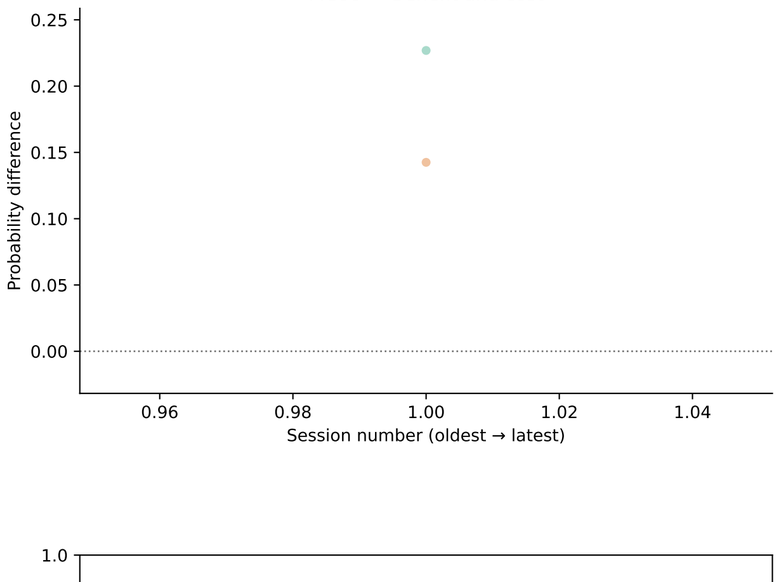
All subjects — Benefit — first 1 aligned sessions



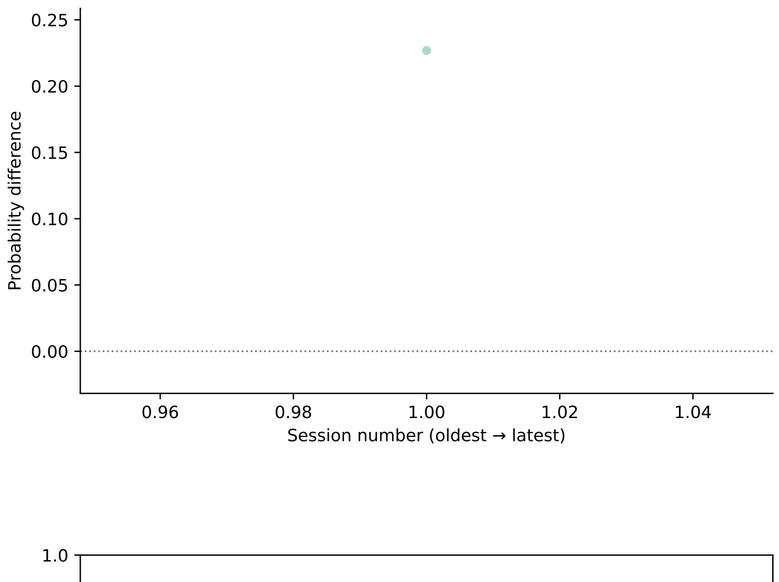
All subjects — Cost — first 1 aligned sessions



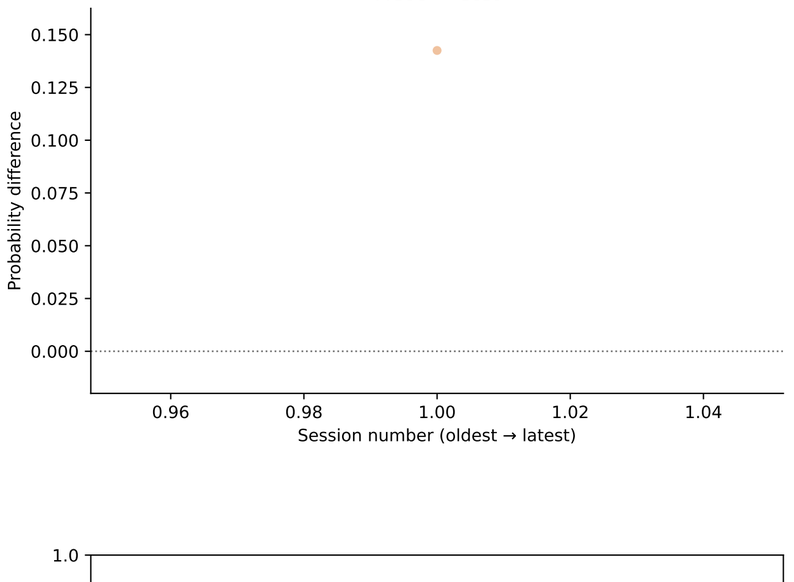
MC06 — Benefit and cost

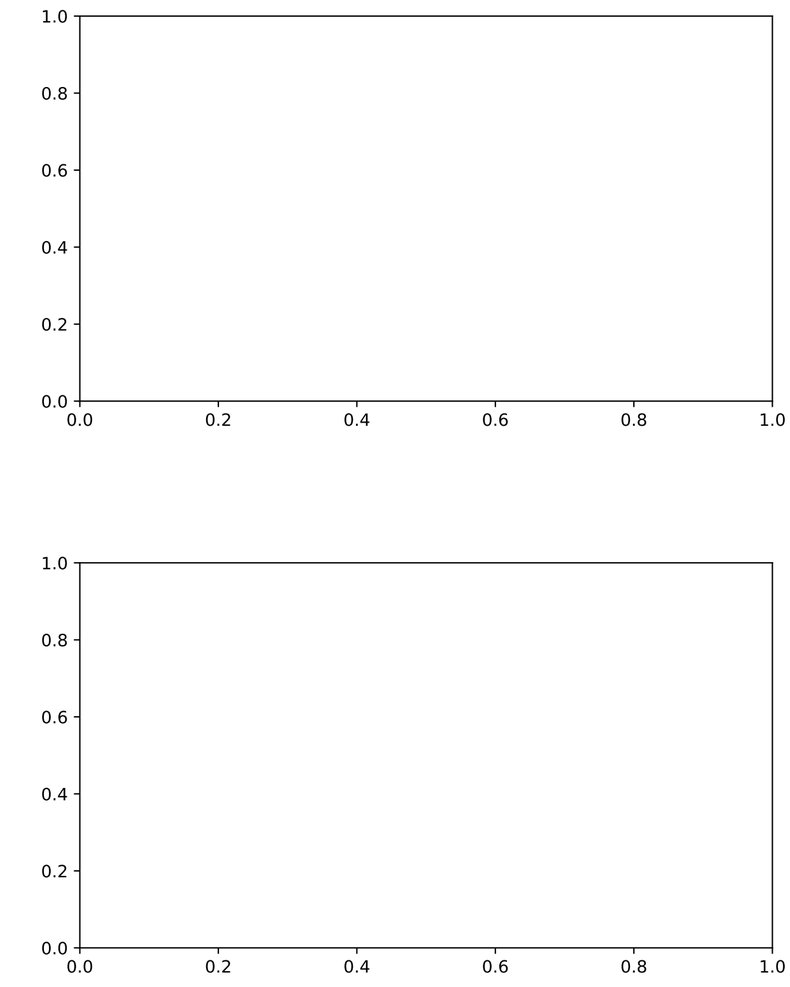


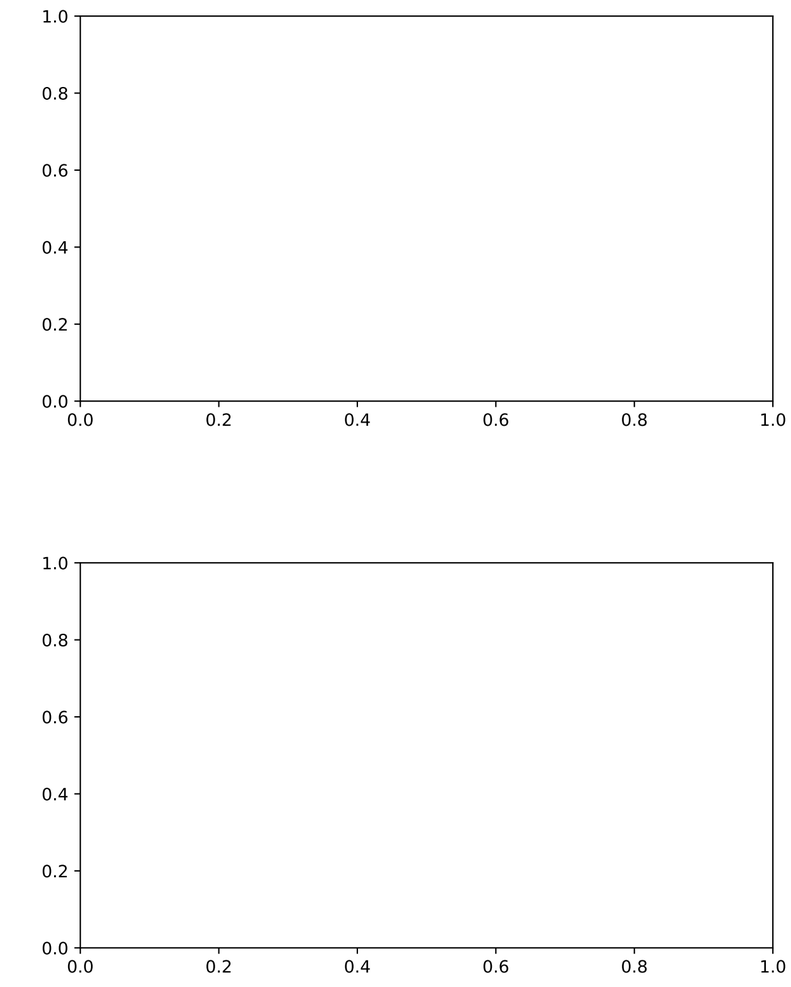
MC06 — Benefit

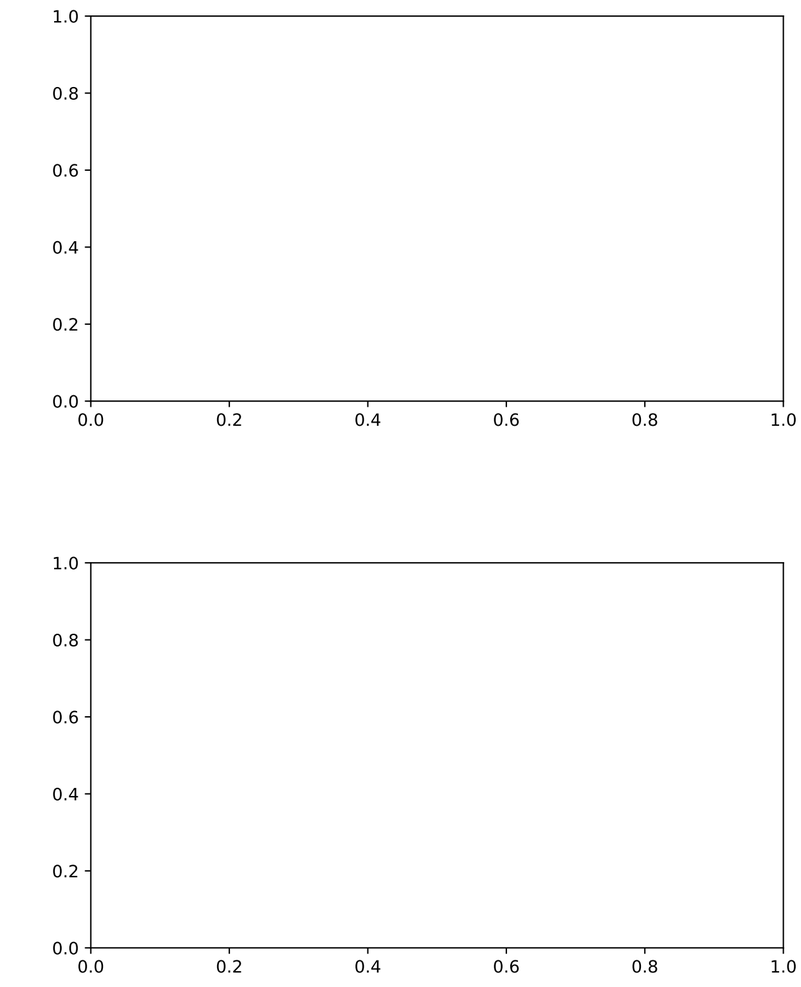


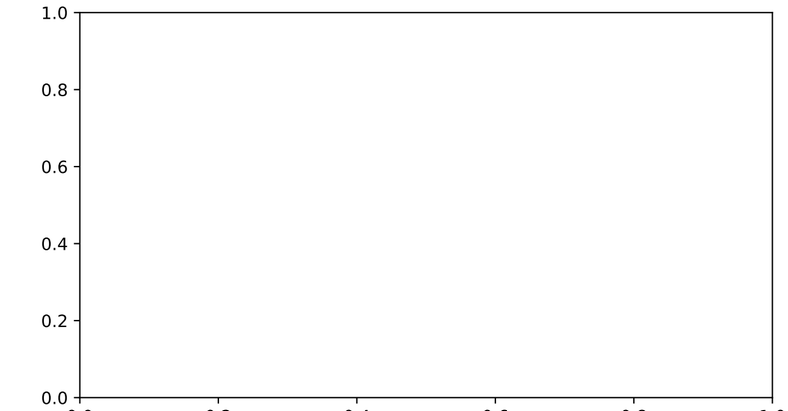
MC06 — Cost

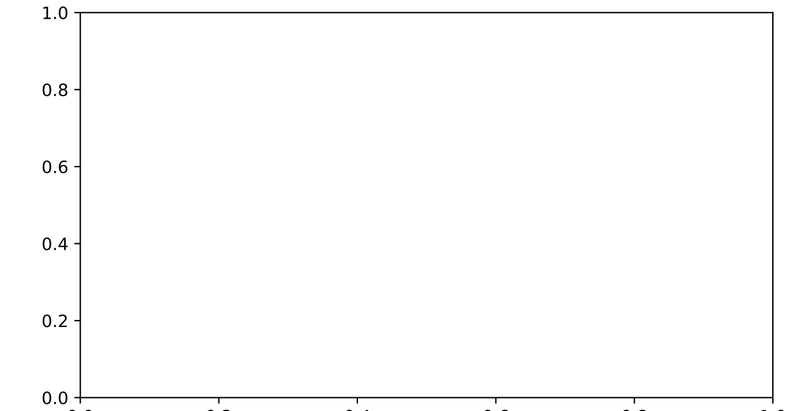


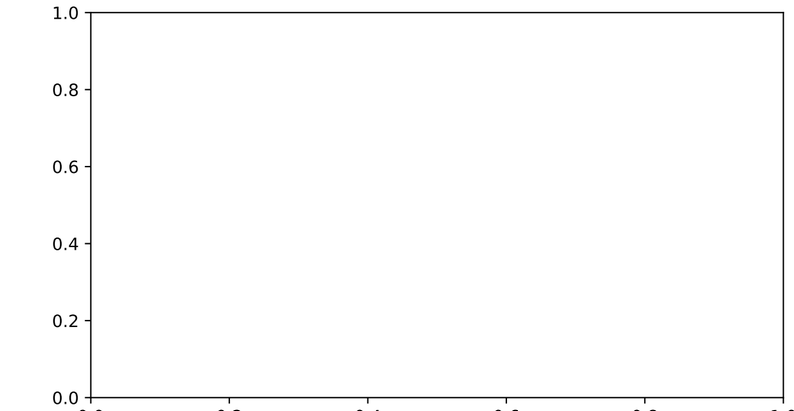












PAGE 2: Meta-learning across sessions — 5-session rolling mean (chronological order)
Benefit = P(correct | common) − P(correct | neutral); Cost = P(correct | rare) − P(correct | neutral)

PAGE 3: Session-level context value (chronological order)
V_context = p_common × Benefit + p_rare × Rare penalty; Rare penalty = Cost = P(correct | rare) − P(correct | neutral)
